

# EXTERIOR WOOD SIDING

**Embois** finished products are known to be an ecological solution, as wood is a renewable and clean resource. Our mission is to provide our customers with finished products that have exceptional durability and a unique look. A noble building material, wood siding will bring aesthetic and functional solutions to your projects, perfectly integrating with their environment, as well as the ideal alternative to aluminum or vinyl siding. The choice of the wood species, depending on the nature of the project, will allow you to optimize its durability and create the much-desired warm atmosphere. Our wide selection of wood species, sizes, profiles and finishes will allow you to personalize your decor style whether it be country, rustic or scandinavian.

## OUR STRENGTHS

- Manufactured from high-quality raw wood.
- Extensive network of high-quality wood supply.
- State-of-the-art equipment and an experienced team committed to the quality of the finished product.
- Local manufacturing at our Lachute plant.

Embois was born out of the dream of building dwellings that live in perfect harmony with their natural environment. Our evolutionary design method allows us to meet your demands while ensuring a correct, perfect and even scalable implementation during your project. The final result produces a place where the house and its environment merge.

# EXTERIOR WOOD SIDING

## TECHNICAL DATA SHEET

### TECHNICAL ASPECTS

Our wood siding offers several width options, typically between 4 and 6 inches, to suit customer preferences. Embois also offers a variety of profiles for its siding, the typical Embois profiles without visible nails with a solid interlocking, facilitating a quick and simple installation. It is also possible to create unique profiles according to the customer's preferences.

Embois only uses high-quality finishing products such as SANSIN products, a world leader in ecological wood protection. Their water-based coatings stand out for their efficiency and aesthetics. We offer an extensive range of color options to meet the specific needs of customers, whether opaque, translucent, or two-tone (translucent dye printing and requires less maintenance), all tastes and needs will be satisfied. It is also possible to develop custom colors.

	Species	Thickness	Texture	Profile
Siding	Western red cedar, SPF	1 1/16"	Sanded, brushed, rustic	Customer's choice
Grating	BC Fir, western red cedar	2" and more	Sanded, brushed	_____
